PROJECTS

Timely: Calendar App + ML Optimized Notifications | *Dart, Flutter, Firebase, Python, Django* FA 2022 – SP 2023

- Led team of three in the development of a cross-platform mobile app for Android and iOS.
- Mediated resolution between two team members, resulting in team crafting good communication protocols.
- Collaborated with backend developers to integrate Firebase and Django for real-time data syncing and notifications.
- Created seamless UI/UX based on Material 3 design principles and iterative user testing.

Human-Centered Design Project for TRAILS Adaptive™ | *HCI, Figma*

FA 2022

- Led team in developing of user stories, research, and usability testing.
- Applied user-centered design principles, including contextual inquiries, card sorting exercises, low-fidelity wireframes, and high-fidelity prototyping.
- Recognized by TRAILS Adaptive team for thorough collaboration and understanding their programs needs.

Modern Python Web Browser | *Python, JavaScript*

SP 2022

- Developed Python web browser from scratch with GUI, HTML/CSS rendering engine, JavaScript interpreter.
- Implemented URL parsing, HTML and CSS rendering, and DOM modification functionalities to handle website navigation and content rendering.
- Created GUI browser console and debugger to enabling developers to inspect and debug web pages.
